By Seamus Islwyn Updated September 22, 2017 When you compose a song on your computer, manually entering different chords into your MIDI sequencer can be tedious. If you want to hear what the chords sound like without having to program it, use the player's online chords. HotFrets Progressionator lets you hear simple chords played on an electric guitar, while WholeNote's Groove Builder lets you write more complex chords and then hear a three-piece band play them back. HotFrets Progressionator/Navigate to HotFrets.com. Open the Cool Tools menu and select The Progressor. Click on the key in the Key column and then select the chords from the Progression list. Choose a style of play - Fingerpicking or Power Chords, for example - from the Style column. Click Create a Progression. Click Play to hear the chords. WholeNote Groove Builder/Navigate WholeNote.com click on the Groove Builder button. Select the length of chords you want from the Length menu, select the music genre from the Style menu, and use the Resolution menu to determine how many chords in each measure. Click on the radius button in the chord matrix to insert the corresponding chord into the progression. Use the first two rows in the matrix for simple basic and minor chords; to insert a more complex type of chord, select it from the fall out menu under Minor, and then press the radio button corresponding to the desired chord. Choose the type of guitar from the Sound menu at the bottom of the screen. Choose the tempo from the Tempo menu. Set the volume levels of the guitar, bass and drums using the drop menu next to their names. Click Play to listen to the chords. This story appears in the March 1997 issue of . Subscribe Vanessa Singer found a kick in another strum. When Vanessa Singer discovered that she needed surgery as a result of a brain haemorrhage, she began playing guitar to help her cope with the upcoming surgery. With practice, the singer found that her creativity increased, encouraging her to continue dabbling in the game and writing songs. When one of her new tracks called for the sound of passion fruit - a shock instrument like a shaker used to create a rhythmic rhythm - the singer tried to shake the passion fruit by strumming the guitar. Unable to fit the passion fruit in her hand and at the same time play the guitar, singer creatively approached: went to the kitchen for a small knife, cut a gap in the passion fruit and shoved into it a guitar pickup truck. Her new homemade invention allowed her to easily provide her own drum accompaniment. The rest, as they say, is a musical story. I knew for sure right there, recalls Woodland Hills, California, the inventor, that I have something on every music store counter in the world. Commercial version of Singer's invention, The Rhythm Pick, hand percussion The egg-shaped limited two-guitar picks are currently sold in more than 40 countries, and generated sales of about \$15 million worldwide. The singer's company, Take Your Pick Inc., has also developed two new products: Rhythm Thang, a shock shaker with the same body as Rhythm Pick, but with an elastic Velcro attachment to match the outside of your hand, and a rhythm bag, suede and leather-like shaker bag that offers two tones that allows the user to shake it as a maraca or as a tambourine. But the singer's success didn't happen overnight, and it didn't come beating her door. After submitting her product to potential investors and obtaining a patent, Singer began her research. First, it test-marketing the product in music stores across California, shooting staffs and allowing customers to try out the product by collecting opinions about its pick. Within three months, Singer has amassed 2,500 opinions on how to develop and improve her product. When I first gave it to people in music stores, they looked at me like I was crazy, the 28-year-old singer explains. Then when they actually tried it and heard the demonstration, they got excited. The next task of the singer was to study various aspects, such as advertising, promotion and accounting, - the creation of her business. She estimated that it took about \$50,000 generated by investor loans to start her own business, which covers patent costs, computer design, and mold production for her product. With a variety of acclaim from such well-known movers and shakers as Wolf Marshall, one of the most respected guitar instructors in the world, and Paul Stanley of KISS, Rhythm Pick has definitely created a riff in the music world. Says Singer: If you have something that you believe in and you get a good, exciting response from other people, it's inspiration enough to accomplish everything you want to achieve. I have a very, very good time. Alyssa Lee, a freelance writer living in Los Angeles, knows only three chords on the guitar. Contact SourceTake Your Choice Inc., (818) 710-8945. He chose the first chord of Night of the Hard Day. Here he explains the process behind this iconic sound. For those who are not musicians or who are not familiar with the theory of music, the chord is just two or more notes that play together at the same time. For example, if someone had to place one hand on the piano and hit two keys at the same time, that would be a chord. A chord or grouping of notes played at the same time can create harmony when two or more notes complement each other. Chords add texture to the melody, and can even provide the rhythm of the song. The most commonly played chords of the triad, the grouping of three, so-called, because they consist of three different notes: the root note, and the intervals of the third and fifth above the root note. There are many kinds of chords. Some sound is dissonant, that is not harmonious. Some have two notes of chords, others more than three notes, and some chords can be broken. Let's look at the different musical chords. Two-volume chords are called intervals. In music theory, the interval is the difference between two pitches. The interval is called depending on its quantity and quality. For example, the main third is the interval name, in which the term basic describes the quality of the interval and the third indicates its number. Number of intervals notes that she covers. Both the lines and spaces of the musical staff are taken into account, including the positions of both notes that form the interval. For example, the C to G note is the fifth, as the number of notes from C to G is five (C, D, E, F, G) that occupy five consecutive staff positions, including posts C and G. The name of any interval is additionally qualified using terms perfect, large, minor, supplemented and reduced. Some chords have different qualities to their sound, which may not sound in perfect harmony, and these qualities are known as reduced and supplemented chords. They may seem strange or unbalanced. It's dissonance, and while these chords tend not to be pleasantly ear-pleasing in the traditional sense, they're quite fascinating when placed strategically in music. Chords can have more than three notes, these chords are known as tetrad or Grated chords. These can include seventh chords, added tone chords, extended chords, altered tone chords, and tone clusters. Notes in a broken chord are not played at the same time, just as it sounds, it is broken into a sequence of notes. A broken chord can repeat some notes from the chord, too. The musical term arpeggio means playing a broken chord in an ascending or ascending order. Each arpeggio is a broken chord, but not every broken chord is arpeggio. The ordered series of chords is called chords or harmonic progression. Chords are the basis of harmony in American music and classical tradition.
